

IronOrbit Emphasizes Resilience in the Face of Challenges

Monday, February 27th, 2023 - Anaheim Hills, CA - IronOrbit, a specialized GPU focused cloud services provider celebrating 25 years of continuous innovation, was proud to participate in the first in-person conference of the ACEC's California Chapter since 2019. The event brought together friends, colleagues, and clients, focused on building stronger, healthier businesses with an emphasis on "Resiliency and Sustainability."

IronOrbit's team was honored to showcase their **GPU-Accelerated INFINITY Workspaces**. This cloud-based solution helps businesses become more resilient in the evolving remote and hybrid work environments. Attendees had the opportunity to learn more about IronOrbit's sustainable solutions, including cloud-first computing, AI-enabled security, and smart managed services.

According to IronOrbit Marketing Manager Kamron Naderkhani, *"The next few years are crucial for AEC firms. The pandemic forced many firms to change their operations to accommodate remote working. For many, these were temporary fixes to weather the storm. Realizing that it has permanently transformed the work landscape, firms must decide to move to the cloud or struggle with getting people back in the office. Our INFINITY Workspaces centralize their data and provide the capacity for hybrid work while delivering better protection to their IT infrastructure."*

Having alignment with the right technology is an essential part of becoming more resilient. IronOrbit's cloud-based IT services, ideal for the unique demands of modern engineering firms, provide businesses with scalability, flexibility, and better security. These cost-effective cloud solutions are a way to modernize IT infrastructure, improve business operations, and enhance productivity.

ACEC California is the nation's largest Member Organization in the American Council of Engineering Companies (ACEC), represents over 1,000 engineering and land surveying firms and nearly 25,000 professionals involved in all aspects of the design, construction, and repair of California's residential, commercial, industrial, and public works infrastructure.

IronOrbit is a leading provider of Managed DaaS cloud solutions for engineering and construction companies, with a continuously evolving portfolio of innovative technologies that support business growth, resilience, and sustainability. With IronOrbit, companies can increase productivity, reduce costs, and gain a competitive advantage. Learn more about how our solutions have helped our customers at [IronOrbit Case Studies](#).
